Programmer application

TURBO-PROG supports two types of turbo actuators:

Hella
Siemens

For Hella actuators TURBO-PROG allows the user to:

read actuator parameters,
store actuator parameters in the device internal memory,
program actuator parameters,
copy actuator parameters.

The term 'actuator parameters' means the following information:

actuator type,
gearbox number of compatible gearbox,
version of actuator firmware,
range of operation of geometry lever.

For Siemens actuators TURBO-PROG allows the user to:

1. program range of operation of geometry lever,
2. check range of movement of an actuator.

When replacing Siemens actuator (both new and used), there is a need to program the correct range of operation. TurboProg device enables to perform this procedure by replacing service tool VAS-6395.

Actuators supported

The programmer supports the following units:

- Hella actuators with the following markings:

712120

730314

781751

763797
